

ANNUAL REPORT
57th 1939

SCIENCE

points the way

*The
Presbyterian
Hospital*

OF THE CITY OF CHICAGO

SCIENCE

points the way

In his centuries-long quest for means to protect himself against the ravages of disease, man has run the gamut of superstition, mysticism, physical torture, and potions of every description. He has attributed illness to machinations of gods, devils, and witches, seeking to overcome it by every form of appeasement that his desperate need conjured up.

Even the practice of medicine itself was steeped in superstition for many centuries. Arabian physicians, among the most advanced of earlier times, placed the lucky sign of Jupiter over their prescriptions. Altered somewhat and known as the sign of the Angel Raphael, it was used in later centuries by European physicians and has persisted to our time in the form of the familiar Rx. However, the Rx of today is no longer a symbol of superstition but rather a symbol of science, for it is science which now points the way in the treatment of disease and injury.

Although unprecedented progress has been made in the last fifty years, humanity owes much to those who laid the foundation on which the present imposing structure has been built. Hippocrates, called the "Father of Medicine," was followed by a long line of searchers after truth, among them: Harvey, who discovered that the blood circulates; Janssen, inventor of the first compound microscope; Laennec, inventor of the stethoscope; Claude Bernard, pioneer experimental physiologist;

Long and Morton, who first used ether as an anesthetic; Pasteur and Koch, on whose discoveries bacteriology is based; Lister, originator of asepsis in surgery; and Jenner, who developed the smallpox vaccine.

As we pay tribute to those who laid the foundation stones, it seems almost incredible that within the brief span of the last fifty years science has given us the immeasurable benefits of X-ray, radium, and insulin; practically eliminated some diseases and cut others to a minimum; found ways to successfully combat tuberculosis, pernicious anemia, pneumonia, maternal morbidity, and many of the diseases of infancy and childhood. Science also points the way to prevent diphtheria and scarlet fever, to combat streptococcal infections, to eradicate cancer in its early stages, and to help repair the ravages of infantile paralysis. It has given us the iron lung, the ultraviolet ray, short wave diathermy, the metabolism machine, and other valuable diagnostic and therapeutic aids.

In this epic of scientific progress, the teaching hospital has played and will continue to play an indispensable role. Here are found the mechanical facilities and the highly trained professional and technical personnel essential to scientific diagnosis, treatment, and research study. In the properly equipped teaching hospital, as in no other place, science is given an opportunity to point the way to conquest over disease and injury.

...isn't it great to be alive!

BENEFICIARIES

of a priceless heritage

EVERY person who becomes a hospital patient today is the beneficiary of a priceless heritage bequeathed by the men and women who have made scientific contributions to the advancement of medical knowledge and by those others who have helped to make possible the spreading and use of this knowledge through the establishment and maintenance of medical schools and teaching hospitals.

Many of the achievements of modern medical science are measured best at long range. Take for example the husky, happy six-year-old in the picture on the opposite page. One can scarcely believe that he has lived since babyhood with only one kidney, the other having been removed when he was ten months old because of a malignant growth. The vigorous 78-year-old man in the picture can still enjoy a game of golf now and then, despite the fact that he has been near death in the Hospital on two occasions in the last seven years.

Somewhere in Chicago a beautiful little girl of seven years is seeing the world about her with one perfectly normal eye because a diagnosis made in Presbyterian Hospital two years ago resulted in the removal of the other eye, in which glioma, a malignant growth, had developed. Removal of the affected eye prevented the disease from spreading in the body, which would have resulted in prolonged illness and finally death.

Four-year-old Mary didn't have an upside down stomach, but clinical and X-ray examinations showed that her heart was displaced far to the right and the left lung was collapsed because almost the entire small bowel and much of the large bowel were in the chest. An operation replaced the organs in the abdomen, gave the partially collapsed lungs space

in which to expand, and set little Mary on the road to normal health which she is now enjoying.

The biplane fluoroscope, one of the few machines of its kind available in this part of the country, is a valuable aid in removing foreign objects from the bronchial tubes of the lungs, the esophagus, and other parts of the body, and is useful in some types of fracture work. It has two X-ray fluoroscopic screens which afford views through the body in two directions at the same time. Recently a nail was removed from deep down in the lung of a patient brought to this Hospital from another city, where an attempt to remove it by use of a single-plane fluoroscope had failed.

These are only a few of the thousands of Presbyterian Hospital patients who year after year are beneficiaries of the priceless heritage of scientific progress in the diagnosis and treatment of disease. Many diseases once considered hopeless are responding to new forms of medical treatment, and results which were unheard of a few years ago are now accomplished in every branch of surgery. Mechanical devices and other therapeutic facilities and procedures are being utilized more and more to supplement medicine and surgery in the mending of bodies broken by disease and injury. Each year the percentage for whom the efforts of science prove unavailing grows smaller, and each year some new victories are scored.

The Presbyterian Hospital claims no monopoly of scientific achievement, but the fact that this institution is the scene of progress on various fronts in the battle against disease is noteworthy for the information of those whose interest and support help to make this progress possible.

TEAMWORK

finds the answers

TODAY in the hospital, clinical study and laboratory science are as inseparable as the once-famous Siamese twins. Many of the notable discoveries of the last quarter of a century are the result of this close association.

Clinical study covers all the factors revealed by the patient's apparent condition and symptoms, as well as the history of his past illnesses and physical condition. Laboratory science furnishes additional facts which confirm or rule out the conclusions of clinical study.

Not only does clinical study consider the information obtained from examination of and conversation with the patient, but it also takes into account the recorded observations of the nurses from the moment the patient is admitted to a hospital bed. The intern usually takes the patient's history and sees him as frequently as may be necessary between visits of the attending doctor. The resident physician consults with the intern and the attending doctor and, if an emergency arises in the absence of the latter, the resident doctor is at hand to take such measures as are deemed necessary. The head nurse keeps informed about the patient's condition and guides staff and student nurses in his care, as directed by the doctor. These four persons are the nucleus of the team which works for the welfare of the patient. But they do not comprise the entire team.

Laboratory science is utilized in behalf of practically every patient admitted to the beds of the Hospital and most of the ambulatory patients who visit the examining rooms. The laboratory is directed by a physician and surgeon who is trained especially in the interpretation of microscopic, chemical, and bacteriological characteristics of diseases. The staff includes a Ph. D. chemist and a bacteriologist with a Master's degree. In each department there are several technicians, most of whom have had at least four years of university work, with specialization in their particular subjects.

Including the work of the laboratory staff and

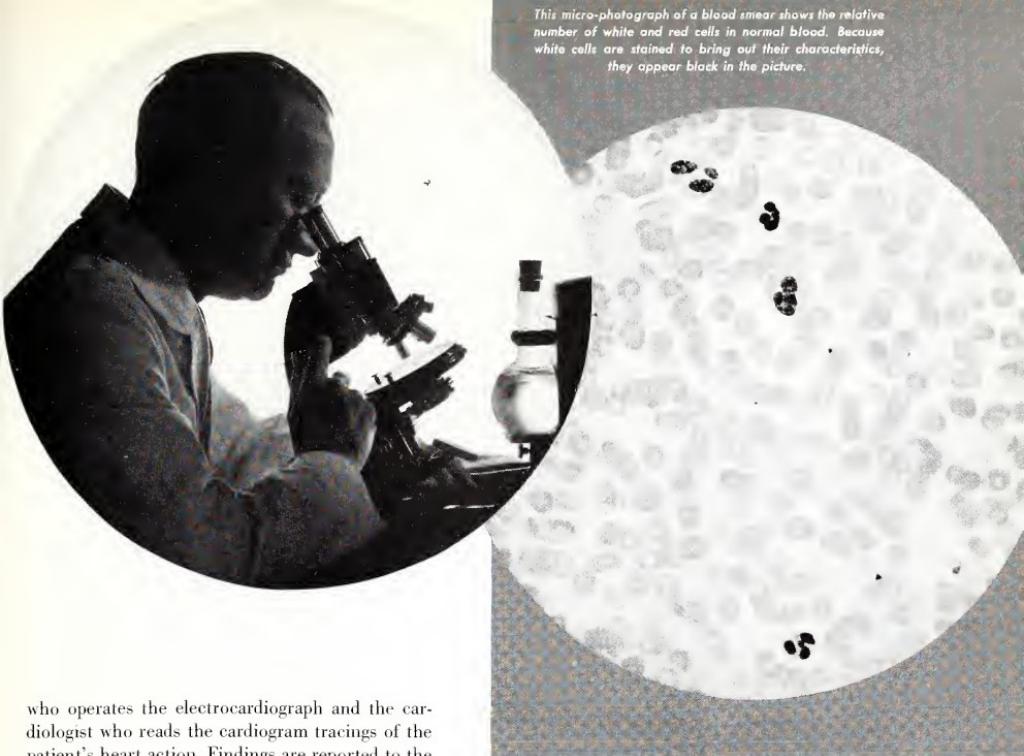

that done by interns, more than 100,000 laboratory examinations and tests were made in 1939 in the interest of Presbyterian Hospital patients. Examinations and tests by the laboratory staff totaled 38,704, as follows: bacteriology and serology, 22,028; chemistry (blood, etc.), 12,279; metabolism, 2,022; surgical specimens, 2,375. In addition, interns in the Hospital perform examinations for their own patients, such as blood counts, urinalyses, and examinations of stools and of stomach contents. Their average day's work in the laboratory includes 50 urinalyses, 50 blood counts, 100 stool examinations, and 25 gastric examinations.

The team that is seeking the answers for the benefit of the patient is quite likely to be further augmented by the X-ray technician, who takes the films as directed by the attending doctor, and the roentgenologist who interprets the films and furnishes a written report to the doctor, consulting with him when desired. Last year 35,701 films were taken in the X-ray department of the Hospital, and X-ray fluoroscopic examinations numbered 7,340. The roentgenologist is a physician and surgeon, who has had additional specialized training in radiology and is a diplomate of the American Board of Radiology.

Still others who may be called upon to join the Hospital's answer-finding team are the technician

The head nurse, resident physician, and intern stand by while the attending physician scans the patient's chart.

This micro-photograph of a blood smear shows the relative number of white and red cells in normal blood. Because white cells are stained to bring out their characteristics, they appear black in the picture.

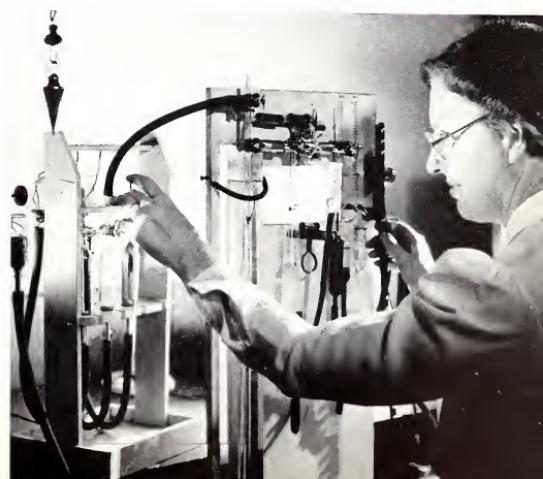

who operates the electrocardiograph and the cardiologist who reads the cardiogram tracings of the patient's heart action. Findings are reported to the attending doctor and consultation given when the latter desires it. Cardiograms made in 1939 totaled 1,800. The cardiologist in charge of this department is a physician, with additional specialized training and broad experience in this field.

Not infrequently one or more specialists in other indicated fields will be called in as consultants before the diagnosis is completed and the nature of treatment determined.

A special group organized in the past year to give patients the benefit of teamwork in diagnosis and treatment is the staff in charge of the Tumor Clinic. Under this plan patients have the advantage of meeting in one place medical internist, pathologist, surgeon, and roentgenologist, whose combined judgment is carried out in prescribing treatment.

This in brief is the story of how TEAMWORK in the hospital usually succeeds in finding the answers which reveal the cause and nature of illness and the kind of treatment that will prove effective.

In the metabolism test the patient's exhaled breath is first collected and measured in the gasometer tank. Later, samples of the breath are analyzed on the apparatus shown below to ascertain the exact amounts of oxygen consumed and carbon dioxide expired. This information with other data determines the metabolic rate.

To the trained eye of the cardiologist
the tracings on the electrocardiogram
reveal important facts about the pa-
tient's heart action. Calipers aid in
measuring the minute time variations
in the heart beats.

The electrocardiograph is an intricate in-
strument of precision which enables the heart
to write its own story of health and disease.
This machine installed recently is equipped
with devices that record simultaneously the
action currents, heart sounds, and pulse.

More than 35,000 X-ray films were
made in this hospital last year.
In the picture the roentgenologist is
interpreting to an intern films of a
fractured femur before and after it
was repaired.

Shoulder to Shoulder with SCIENCE

A GENEROUS lifetime has elapsed since Florence Nightingale sailed off to the Crimea with a handful of women volunteers. Their efforts to aid the wounded soldiers were crude and fumbling because their skill was meager, but out of this beginning came the science, the art, and the spirit of modern nursing. Because Florence Nightingale dignified such service, nursing ceased to be the unscientific, scorned work of the serving woman; because her successors were worthy of her, it has become an honored profession.

Today young women recruited to its ranks bring academic preparation comparable to that demanded by other scientific fields. This is supplemented by specialized instruction and clinical experience of ever-widening scope. No longer is nursing the performance of tasks in blind subservience. Now it aids and makes possible the successful outcome of the physician's treatment and the surgeon's skill.

Not only does the nurse of today administer the medication but she does so in full awareness of its physiological and chemical significance. Not only must she endeavor to make the patient in the oxygen tent comfortable but she must be alert to clinical changes in his condition and their significance.

Out of her knowledge of foods and body chemistry she teaches the patient with diabetes to understand the miracle of insulin therapy. Because she studies the ways and characteristics of normal child development she learns to care for the sick child with the judgment and understanding which simplify the solution of her clinical problem. Because her instruction and experience include study of the fundamental causes and significance of disease in the community her work is of preventive as well as remedial scope.

She finds a new tool for her task in the blood pressure machine which enables her to check closely the post-operative progress of the patient who has had brain surgery. By the use of the stethoscope she, too, notes fetal heartbeats in the critical hours of labor. She stands beside the operating table a silent, alert, skilled, and intelligent member of the operating team, adding her important abilities to those of the surgeon that the welfare of the patient may best be served.

Thus, working shoulder to shoulder with medical science, the graduate nurse of today fills an essential place in the ranks of the great army who are fighting for human welfare and progress.

It's 7:00 A. M. and the "guard" is being changed. The night nurse, standing at the left, with record book in hand, gives the "morning report" to the head nurse, seated. Staff and student nurses, who have just come on duty, listen intently as the needs of each patient are discussed.

ALL THESE

and others, too

WHEN the diagnosis and form of treatment have been determined, the services of one or several highly trained persons will be requisitioned by the doctor. Medication has a place in the treatment of practically all patients. New drugs, chemicals, biological extracts, serums, and other preparations are proving useful, but none of these are cure-alls and they should be used only under the direction of a physician. No medicine of any kind is given in the Hospital except as prescribed on medicine orders written by the doctor. Approximately 75,000 such orders are filled each year by the Hospital pharmacy.

For major surgery a team composed of the operating surgeon, anesthetist, resident surgeon, intern, and at least two specially trained graduate nurses and two student nurses will be on hand. An orderly will take the patient, accompanied by a nurse, to and from the operating room. For minor surgery, the operating room team may be slightly smaller. The total number of patients cared for in the operating rooms in 1939 was 11,930—including 2,053 major operations, 5,471 minor operations, and 4,406 surgical treatments and examinations. In an average operating day 800 surgical instruments and 900 pieces of linen are among the supplies used.

Diet is of increasing importance in the treatment of disease. Each patient receives the type of diet prescribed by the doctor and no change can be made except on his written order. Menus are planned by graduate dietitians and all patients' trays are checked carefully after being set up.

Among the outstanding therapeutic advances of the last few years have been the perfecting of machines and discovery of new agents for the treatment of various diseases.

Presbyterian Hospital has a 200,000-volt shock-proof X-ray therapy machine. Among the recent

developments is a series of cones to be attached to this machine for radiation treatment of various parts of the body. With these cones, lesions in cavities of the body can be treated with the same effectiveness as those on the body surface. This type of therapy has proved useful in infectious conditions and in the treatment of tumors, both benign and malignant.

Because of its penetrating rays radium is useful in treating cancerous growths in parts of the body which are otherwise inaccessible. In Presbyterian Hospital during the last year 103 patients received radium treatment for cancer. These treatments are given by placing a rubber capsule containing radium on the tumor or by implanting a radium needle in it.

One of the most interesting therapeutic devices is the Pavaex machine in the vascular therapy department of Presbyterian Hospital. This machine, sometimes called the "glass boot," applies pressure and suction alternately to extremities affected with poor circulation due to diseased blood vessels. Some advanced cases of gangrene have been treated with marked results; among these were a number in which amputation had appeared to offer the only hope of relief. Many less advanced cases of poor circulation resulting from diabetes or arteriosclerosis have responded readily to the Pavaex treatment. It is also used successfully to clear up the effects of blood clots in the extremities and in cases of severe frostbite. The department is in charge of a physician and surgeon who is a specialist in circulatory disease.

That physical therapy is proving increasingly useful is indicated by the fact that nearly twice as many treatments were given in this department of Presbyterian Hospital in 1939 as in 1937. The 1939 record was 8,037. Types of cases included

(Continued on page 10)

Our hospital pharmacist, 35 years on the job, knows his medicines and proper dosages as well as anyone, but even he refers to the printed word now and then. Among other supplies the pharmacy uses each year 400,000 powder papers and 250,000 capsules.

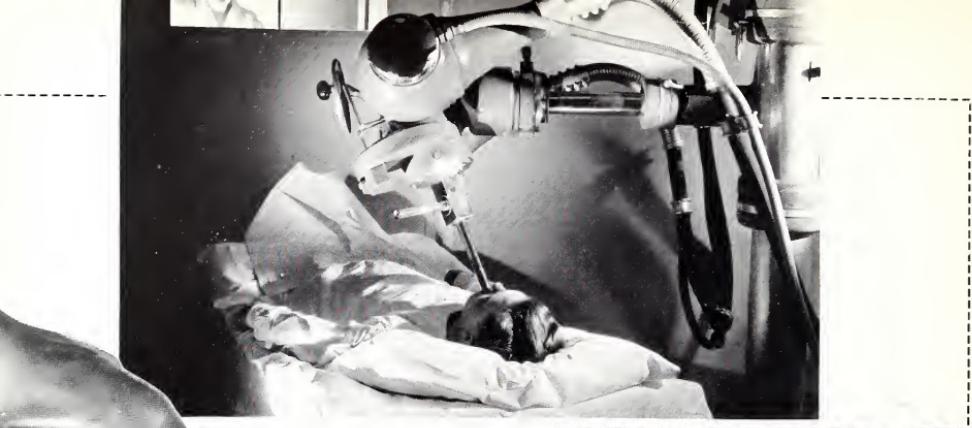

All items on diabetic, reduction, acid ash, and research diets of various kinds are weighed on scales graduated in grams so that the exact amount prescribed is put on the tray. Food that comes back on the tray is also weighed to determine the exact amount of nourishment actually taken, and findings are recorded on the patient's chart.

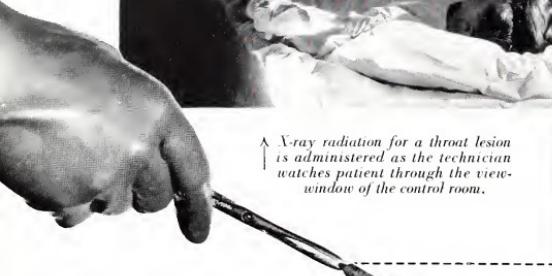

Asepsis is one of the indispensable safety factors in modern surgery. A surgical nurse is shown lifting a basket of instruments from the sterilizer. This is one of the numerous procedures in the rigid aseptic technique observed in the operating rooms.

X-ray radiation for a throat lesion is administered as the technician watches patient through the view-window of the control room.

Radium is put in a rubber capsule, then placed on the tumor to be treated.

Nerve stimulation for facial paralysis is one of various treatments given in the physical therapy department.

Below—poor circulation due to diseased blood vessels is treated effectively with the "glass boot" alternate suction and pressure machine.

(Continued from page 8)

arthritis, fractures, pneumonia, sinusitis, colds, skin diseases, paralysis, and pelvic inflammation. Ultraviolet ray, infra-red ray, short wave diathermy, inductotherm, galvanic current for nerve stimulation, hydrotherapy, and massage are among the physical agents utilized. The department is under the supervision of a physician, who is a physical therapist of international reputation. A registered senior physical therapy technician is in charge.

Occupational therapy, utilized in this hospital since 1917, continues to serve as a valuable aid in treating a large number of cases referred to the department by attending physicians. The work is directed by a registered occupational therapist of broad experience, and is a part of the division of physical therapy.

The Fifty-Seventh ANNUAL MEETING *of The Presbyterian Hospital*

At the fifty-seventh annual meeting of the Society, on May 1, 1940, luncheon was served to some forty members and guests. Dr. Harrison Ray Anderson, pastor of the Fourth Presbyterian Church, gave the invocation, and Mr. John McKinlay, president of the Board of Managers, presided over the meeting.

Messrs. Alfred T. Carton, Albert B. Dick, Jr., Edward D. McDougal, Jr., John McKinlay, and Edward F. Wilson were re-elected Managers, to serve in the class of 1943.

A resolution was passed changing Article IX of the by-laws of the corporation to provide, in place of the committees provided for under the old article, successors to be known as the House Committee, Investment Committee, Educational Committee, Finance Committee, Nurse and Training School Committee, and Nominating Committee.

Reports for 1939 were presented by Mr. John McKinlay, president of the Board of Managers; Dr. Wilber E. Post, president of the Medical Staff; Mr. Asa S. Bacon, superintendent of the Hospital; Miss Dorothy Rogers, director of the School of Nursing; and Mrs. Ernest E. Irons, president of the Woman's Board. These reports and a summary of the auditors' report are to be found elsewhere in this book.

Mrs. Clyde E. Shorey, chairman of the publicity committee of the Woman's Board, reported that to date there had been thirty-five showings of the film, beautifully done in technicolor, showing a typical day's routine in the Children's Department of the Hospital. The purpose of the film is to stimulate interest in the Cheer Up Beds, endowed mainly by offerings from the Sunday Schools of the Chicago Presbytery, and as a result of its showing there has been a marked increase in contributions. Mrs. Shorey made the point that the film, showing

just what goes on in a normal day on the children's floor, emphasizes the need for more endowed nurses.

The Reverend Russell L. Dicks, chaplain of the Hospital, acknowledged the ever-increasing cooperation between the Staff and himself. He said that his appointment as associate pastor of Third Presbyterian Church will undoubtedly prove helpful in his work as chaplain. He has been conducting full-time courses in three seminaries and lecture courses in a number of others.

Dr. George W. Duvall, superintendent of the Central Free Dispensary, commented on the work of the Dispensary during 1939. Visits to it numbered more than 189,000, of which 82 per cent were made by persons who were unable to pay the regular fee of fifty cents per visit. The difference between income from patients and expense for their care amounted to \$70,000. This was taken care of by income from other sources, including the Chicago Relief Administration, the Community Fund, and contributions from friends of the Dispensary.

PRESIDENT'S REPORT

To the Members of the Society

AS LAYMEN working to relieve suffering humanity, we wish to record our progress for the past year. At an annual meeting it seems fitting to review not only the financial status but the intangibles, and this report will deal with both.

The near West Side is one of the oldest areas of Chicago. It was settled in the 1830's, and in the next decade Ashland Avenue became one of the aristocratic residential streets of the young city.

Because of the rapid growth of this area, the founders of Presbyterian Hospital in 1883 realized that here was where a hospital could do the greatest amount of good to the greatest number of people, for it was here that the future center of population would be. These men and women of vision were right, for last year there were 700,000 visits made to the hospitals and out-patient clinics of the great West Side Medical Center. Presbyterian alone accounted for over 50,000 of them, and the Central Free Dispensary, with which we are affiliated, for 189,000 out-patient visits.

I am glad to report that, whereas in 1938 we wound up affairs with a deficit of \$60,000, we finished 1939 with a surplus of \$18,000, of which we set apart \$10,000 as a reserve for contingencies, leaving \$8,000 net for the year—an improvement over the year before of \$68,000.

Of a total gross income of \$1,042,000, our charity account (which includes free care to our own employes) amounted to \$162,000. The operating expenses of the Hospital decreased \$45,000 and the School of Nursing expense increased \$5,000, leaving an operating loss of \$147,000. Subtracting this loss from our non-operating income of \$165,000 leaves the \$18,000 referred to. Our average cost per patient day, including the School of Nursing expense, was \$9.10, or 4¢ less than the year before. Mr. Bacon in his report gives you many more details of our work.

During the year we received donations of \$32,536.84, as follows:

Churches	\$ 4,034.08
Woman's Board	10,038.23
Individuals (including Centenary Fund)	12,739.00
Harry S. Black and Allon Fuller Fund	1,438.49
Minnie Frances Kleman Fund (<i>to be used for epileptics</i>)	3,500.04
Other donations for specific purposes	787.00

Asa S. Bacon, superintendent of Presbyterian Hospital, the Right Reverend Monsignor M. F. Griffin, senior trustee, and Dr. Fred G. Carter, president, of the American Hospital Association, at the dedication of the Asa S. Bacon Library on February 12, 1940.

These contributions are individually acknowledged in the financial reports.

Additions to the endowment funds in 1939 included \$10,000 from Stanley G. Harris to name a memorial room for his mother, Emma Gale Harris; \$5,922 contributed through the Woman's Board; and the following bequests:

Kate S. Buckingham	\$ 10,000.00
Jennie Norton Crosby	1,000.00
Cyrus H. McCormick	25,000.00
Daisy J. Snow	10,000.00

The total of additions was \$61,946.03, and at the end of the year our endowment funds stood at \$4,061,233.90. We have learned that we are to receive for endowment purposes \$50,000 from the estate of James Simpson and \$50,000 from the estate of Orson C. Wells.

During the past year we spent in repairs and renewals \$45,884.71, of which the chief items were:

Jones Building—rewiring, plastering, fixtures, and new linoleum	\$9,235.95
Refurnishing three rooms	1,070.00
15 crank beds	608.00
X-ray equipment	1,544.23
Freas incubator for laboratory	340.00
Water softener	6,674.15
49 hangers for window-washers	872.91

In our last report we mentioned some proposed changes in the Obstetrical Department and other improvements that might cost as much as \$150,000. We did not do this work last year, but our plans are maturing and shortly we will be presenting the facts and figures for the approval of the Board of Managers. Other expenditures that should be considered for 1940 are:

- installation and equipment of new room for intravenous solutions
- storage room for X-ray films, on roof of Jones Building
- redecorating and refurnishing of six private rooms
- Judd cubicles for women's wards
- many needed improvements in the Nurses' Home

In 1939 we lost through death Dr. Gatewood and Dr. Samuel R. Slaymaker. These men had faithfully served this institution during many years and they will be missed from our professional family.

During the year Miss May L. Russell, who was with us for thirty-six years and for several months was acting director of the nursing school, retired from active service. She had endeared herself to not only the students but the entire staff, and we feel a wonderful personality left us when she resigned.

A hospital is known by its staff. Ours is one that we are proud of. Within the last year Dr. James B. Herrick, who has been a member of the Medical Staff since 1891, received the American Medical Association distinguished service award for outstanding work in the field of medicine. Other honors have come to him from the American College of

Physicians and from the Medical School of the University of California. News of our staff members' activities and of honors conferred upon them is published from time to time in our monthly bulletin, which we hope you receive.

In June, Mr. Bacon will round out forty years of service to the Hospital—years in which he has done perhaps more than anyone else to make this institution what it is. You will like to know that the American Hospital Association has dedicated its library in his honor, "in appreciation of a lifetime of service he has given to the hospitals of America." This library and service bureau, at Association headquarters here in Chicago, is the largest and most comprehensive of its kind in the world, and we are proud that it is to be known as the Asa S. Bacon Library.

The managers wish to express their appreciation to the medical and nursing staffs and all Hospital employees for their loyalty and devotion to the common task.

No report of the president could be complete without grateful recognition of the very valuable work of the Woman's Board, whose head during the year has been Mrs. Ernest E. Irons.

We are grateful to the friends of the Hospital whose generosity permits us to do the work that so greatly needs to be done. We hope that the great heart of the Presbyterian Church will assure the Hospital of sufficient support so that its doors may never be closed to the sick and needy who seek admittance to its shelter.

JOHN MCKINLAY, President

Convalescent patients chat with friends in the Pavilion solarium.

Average number of special duty (graduate) nurses, 63 • Average number of student nurses enrolled, 168
Number of patients' beds, 378; bassinets, 35. • Average daily cost per patient, \$9.10*

*Including School of Nursing expense

ALL THINGS CONSIDERED

BY HOWARD VINCENT O'BRIEN

THIS is an advertisement, and a rather strange one; for nobody will want the bill of goods it pushes.

It's an advertisement for a hospital—the Presbyterian, to be precise. The outside of this establishment leaves something to be desired in the way of charm; and even the inside is lacking in the sort of scenery I would pick for a vacation. But there is something about the place, not to be expressed in terms of brick or hardware—an atmosphere; and I don't mean that rich and fruity flavor of ether, disinfectant and aging flowers that greets the nostrils of one who visits a hospital.

What I am trying to say is that this institution has a soul. It must be the lengthened shadow of some man; and I wonder who he is.

Advertisement

I don't know how you measure soul; or how you tell when it is present and when it isn't. I only know that you can tell. I don't think that this hospital has a book of rules for the treatment of patients and their relatives. This thing I am talking about doesn't come out of any book of rules. It's like the perfume of a rose. It's the most definite thing in the world; but you can't measure it or weigh it or see it under the microscope or get an X-ray picture of it.

A visitor to a hospital has a lot of time to think. Especially when the doors to the operating room have closed, and there is nothing to do but wait for what heaven has in store. That's when you think about riddle of fate, of life and death and mysteries, great and small. If you can, you keep your mind on the small mysteries—enormous trifles, such as the fineness to which a pencil point can be sharpened before it breaks.

Waiting

I think back over the diary of my thoughts while waiting. There was the sunrise, first; and the strange sounds that come from a waking

city. But stranger still was the doorman and how cheerful he was. It seemed strange that a person could be so amiable at 4 o'clock in the morning.

Then there was the clerk at the receiving desk. I can think of many hotels that greet the visitor with less cordiality. And the interns, the orderlies, the nurses—friendly, sympathetic, going about their business with the precision of science, but seeming never to forget that they were dealing, above all things, with that strangely sensitive and unpredictable thing, the human heart.

Even the elevator man. He had rules to follow, and he followed them; but he tempered justice with mercy.

Hospital

Much in my diary of thought concerns the doctor. There is so much more to his work than drugs and tissues, so much more to be depended on than his knowledge or experience. I thought of him, in those dark hours before dawn. It wasn't his eyes and fingers that counted: it was his soul. That, really, was what determined his decisions. There wasn't any substitute for that, and never could be. A doctor's decision is always a guess. It has to be. What he is will decide which way he jumps, not his learning, not his skill, not the hope of fame or reward.

It must be a fearsome thing to be a doctor. He never knows when the telephone will ring and he will have to leap out of bed; and play God.

Deciding things. Beyond doubt, that is the hardest thing in this life. And I think that if a good fairy came to me as I was being born, offering to grant me one wish, the wish I would make would be this: that all my life I might be able to forget the wrong turnings I took.

I am sure that nothing in this life makes so much trouble as the remembrance of mistakes. This is the season of graduation addresses; and if I were making one I'd quote the words of an old soldier to a batch of newly commissioned officers. "Your job is to make decisions," he said. "And you can count yourself lucky if you're right more than half the time."

REPORT OF THE PRESIDENT OF THE MEDICAL STAFF

OUR objective is the relief of human suffering and the prolongation of life. We recognize that this work is one of cooperation with the Hospital board and administration, the nursing staff, the Woman's Board, and friends of the Hospital, and we gratefully acknowledge the fine spirit and effective work of all these groups. Our efforts to accomplish that objective take four main directions: hospital care of the sick; professional services to them; study of the nature of diseases, their prevention and cure; and training of others in medical knowledge and skills.

We take this opportunity to express the appreciation of the staff for the long administration of Mr. Bacon, whose cooperation has been as excellent as his standards. I know of no other hospital that has enjoyed a finer quality of administration over so long a period. The high order of his services has given Presbyterian Hospital a place among those of first rank in America.

The work of the staff has been marked by enthusiastic devotion to their professional duties and loyalty to the Hospital. The staff officers met frequently with the administration to discuss Hospital problems and the undertakings of various committees. Several of these projects will interest you as members of the Society.

1. A Tumor Clinic has been organized, under the chairmanship of Dr. Francis H. Straus and composed of members of the various departments, including X-ray. These men have weekly meetings at which the diagnosis and management of all cases of tumors in ward patients and all referred private cases are discussed. This demonstrates once more that provision is made for the best of care for the poor patient.

2. The Committee on Staff Clinic and Examining Rooms has organized the growing traffic in both these activities.

The purpose of the Staff Clinic is to respond to the public demand for group medicine and clinic service within the reach of persons of moderate means. A patient presenting himself is referred to some member of the Medical Staff. This man makes a thorough examination, requests the advice of appropriate specialists, directs the laboratory examinations through the Clinic office, and assumes responsibility for the management of the case. The cost of all services is adjusted to the ability of the patient to pay, and hospital and professional fees are rendered to the patient in a single sum. Twenty per cent of the professional fee is deducted for administration and developmental purposes. The growth of this service is shown in the fact that attendance in 1939 was four times that in 1937, the year it was organized. There is a lesson for us in the fact that about ninety per cent of these patients have incomes of approximately \$2,000 a year.

3. A more significant educational program is being developed for interns and residents, a necessary measure for the good name of educational opportunities at that level in our Hospital.

4. The Records Committee, under the chairmanship of Dr. Willis J. Potts, established new regulations, approved by the staff, and case records are now completed and filed promptly.

5. Through the efforts of Dr. William G. Hibbs, the records of staff meetings since the organization of the Hospital have been gathered together and bound in several volumes. They are now available in the superintendent's office and constitute a valuable historical record.

6. Insurance of the medical staff and their dependents under the Plan for Hospital Care has been completed within the year.

The occupancy of the Hospital has been noteworthy. It was well filled, for instance, during the period last winter when several leading men of the staff were away from the city. This is due to the fact that younger men are assuming a more important role in the work and welfare of the Hospital.

A letter recently received from the Surgeon General of the United States Army requested the organization of a base hospital unit by our staff. Dr. Lee C. Gatewood has consented to be the chief medical officer and Dr. Edwin M. Miller the chief surgeon. Only the professional personnel will be organized at present. Thirty-two such units (of 122 that would be necessary in time of war) are being organized throughout the country.

Appreciation of our cordial relations with the Board of Managers is felt by the whole staff. Difficult problems of internal policy have been solved in the past, with their cooperation, and we are confident that present and future problems will be solved as successfully. A program of graduate medical education has been formulated by the Rush Faculty and recommendations made to the University of Chicago. Identical recommendations have been made by the staff to the Board of Managers of the Hospital. This matter is now being considered by the two boards. Naturally alternatives will be considered. The staff wishes to be as helpful as possible and hopes only for the best and greatest future of our associated institutions.

The usefulness and professional standing of the Hospital will depend in large degree upon the maintenance of those factors that attract to its staff those who wish to study intensively the underlying nature of disease as well as to perfect themselves in clinical knowledge and skill. The maintenance of an educational program in close association with the Hospital is therefore essential. The advances of the future will depend upon a better understanding of the nature of disease.

of The Presbyterian Hospital

THE first annual report of the present director of the School of Nursing and nursing service concerns itself largely with developments in these departments since she took office on September 1, 1939. For some months previous to that date the School was directed by Miss May L. Russell, dean of students, and the nursing service by Miss Harriet L. Forrest, first assistant of nursing administration. Miss Russell retired from professional service on October 15, 1939, completing thirty-six years' service with the School and Hospital. Few other faculty changes have taken place. The nursing department has endeavored to carry on the high quality of service that has so long characterized the nursing in Presbyterian Hospital.

A class of 23 was graduated from the School in October. Enrolment at the end of 1939 was 174 and, due to the limitations of housing facilities, no spring class has been admitted. The average number of graduate nurses on the Hospital staff during the last year was 127, including head nurses, supervisors in all departments, and those giving bedside care.

To counsel with the director on matters of policy, an Advisory Council to the School of Nursing has been organized, made up of persons representing

groups concerned with the educational program. This council has already proved of inestimable value during the few months of its existence.

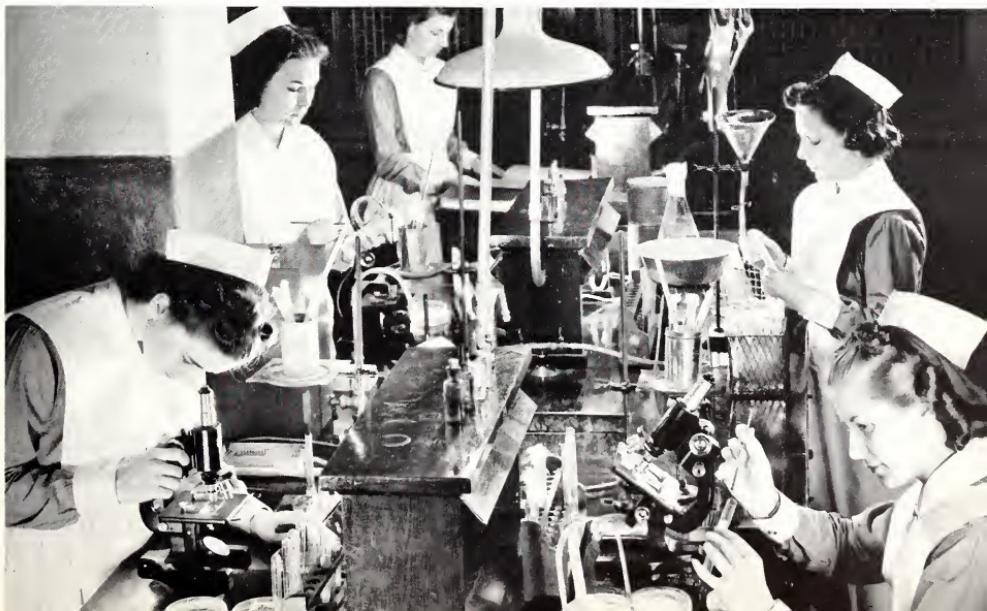

In order to foster a progressive and unified spirit among the students, a Student-Faculty Government Association has been organized and is now active.

The School of Nursing Committee of the Woman's Board has continued its friendly and helpful support of the School. [See Report of Woman's Board, pages 37-39.] Opportunity is here taken to thank the members of the Medical Staff and the Rush Medical School Faculty and all the others who have aided in conducting the courses of the curriculum.

Plans for the future are concerned chiefly with strengthening the organization, content, and conduct of the School work; adding to teaching facilities; and continuing to improve the nursing service in the Hospital. It is the hope of the director and her staff that they will prove themselves alert and receptive to the changing needs of nursing education, to the cooperative opportunities that are afforded by Rush Medical College, and to new techniques in the nursing care of patients.

DOROTHY ROGERS, Director
School of Nursing and Nursing Service

Write me as one who loves his fellowmen

Most of us are familiar with the classic poem by Leigh Hunt which tells the story of Abou Bed Adhem, whose "name led all the rest . . . of those whom love of God had blessed" because he bade his angel visitor, "Write me as one that loves his fellowmen."

Through endowments, bequests, outright gifts large and small, through contributions of time and effort and through their goodwill, friends and supporters of The Presbyterian Hospital have said "write me as one that loves his fellowmen." It is to those who have thus spoken through word and deed that the Hospital owes its existence as an institution affording modern scientific facilities for the diagnosis and treatment of disease and injury, as a haven of mercy for the needy sick, and as a teaching and research center for the advancement of medical knowledge.

Needed equipment and improvements offer many objects through which donors of large and small gifts may be of service to their fellowmen. Gifts toward endowment and for current expenditure are urgently needed to meet the increasing necessity for charity work and to enable the Hospital to go forward as one of the great healing and teaching institutions of the country.

KATE S. BUCKINGHAM

Kate S. Buckingham is perhaps best known to Chicagoans because of her love of the beautiful and her way of sharing it with others, as exemplified by the Buckingham Fountain in Grant Park and her many gifts to the Art Institute. But she loved people, too. To her, inherited wealth meant stewardship which enabled her to be of service to others. Her bequest of \$10,000 to Presbyterian Hospital will perpetuate the name of a great-hearted woman who desired to share in the Hospital's ministry to the sick and injured during all the years ahead.

JENNIE NORTON CROSBY

The bequest of \$1,000 received in 1939 under the will of Jennie Norton Crosby was a further

expression of her lifelong interest and that of her husband, Frederick W. Crosby, in the work of Presbyterian Hospital. Mr. Crosby left a bequest of \$10,000 some years ago. Mrs. Crosby was an active member of the Ladies' Aid Society and its successor, the Woman's Board, from 1887 to 1913, when she was made an honorary member—a distinction conferred on those who have a record of outstanding service to the board but are no longer able to continue as active members. As one of the vice-presidents, Mrs. Crosby for many years had filled a responsible post in the organization.

EMMA GALE HARRIS

Emma Gale Harris, for whom a memorial room was named in 1939, was the wife of Norman W. Harris and the daughter of four generations of doctors, of whom the first was Josiah Bartlett, signer of the Declaration of Independence and first governor of the State of New Hampshire. The gift of \$10,000 in her memory from her son, Stanley G. Harris, will befriend those in need as she befriended them.

CYRUS H. MCCORMICK

Additions to endowment in 1939 testify further to the lifelong interest of Cyrus H. McCormick in the work of Presbyterian Hospital. Mr. McCormick was a member and officer of the first Board of Managers elected in 1883. From then until 1890 his service as a manager was invaluable in helping to place the institution on a firm foundation. He was one of the principal donors to the fund for the building of the Hamill wing in 1887. Throughout the years of his life Mr. McCormick contributed liberally to current expenses, and a bequest of \$25,000 received in 1939 brought his gifts toward endowment to a total of \$35,000. Presbyterian Hospital is proud to have had so large a place in the life and heart of this man, whose fidelity to Christian ideals and many benefactions to humanitarian institutions and objects have said so sincerely "write me as one that loves his fellowmen."

DAISY J. SNOW

Two hospitals and educational work among the foreign born were equal beneficiaries under the will of Daisy J. Snow, widow of Samuel D. Snow. This was fitting, for her life was filled with charitable and civic interests—helping the blind, the crippled, and others who cannot help themselves, and lending her organizing ability to the work of women's clubs. By reason of her bequest of \$10,000 received in 1939, a memorial room in the Hospital has been named for Mr. and Mrs. Snow, and the gift has been added to the general endowment fund, the income from which makes possible the charity work of the Hospital.

Memorial Rooms

Memorial Rooms named in past years by reason of gifts of \$10,000 or more are as follows:

Henry Corwith, by his daughters, Mrs. Charles I. Dangler, Mrs. Ernest A. Hamill, Mrs. Ambrose Cramer, and Mrs. Alfred L. Baker

Tuthill King, who contributed the first \$10,000 toward the first Hospital building

Mrs. Cornelia Johnston Williams, by Simeon B. Williams, Miss Anna P. Williams, and Miss Cornelia B. Williams

John Wentworth, by Mrs. Roxana Wentworth Bowen

Harriet A. Jones, by the D. A. Jones Estate

Mary O. Newell, by the D. A. Jones Estate

Harriet G. Sabin, by the D. A. Jones Estate

Isabella C. Allen, by the D. A. Jones Estate

Frank B. Corwith Operating Room, by Mrs. Henry Corwith Marshall Field, by Marshall Field

Margaret Murdoch, by Thomas Murdoch

Mrs. L. C. Paine Freer, by the L. C. Paine Estate

Francis E. and Vernera L. Corey, by Mrs. John B. Drake, in memory of her parents

Frederick Haskell, by Frederick T. Haskell

Benjamin F. Felt, by Mrs. B. F. Felt

William Blair, by Mrs. William Blair and Edward T. Blair

Henry W. and Aurelia R. King, by Francis King and Mrs. Cyrus Bentley

Abijah Keith, by Sarah Miller Keith

Avaraana

Henry C. Durand, by the Estate of Henry C. Durand

Phoebe Carter, by the Estate of Mrs. Phoebe Carter

Jane Harding Batterill, by her daughter, Jane B. Prince

James C. King, by the Estate of James C. King

Mary H. Poole, by Abram Poole

Albert Keep, by Mrs. Harriet D. Keep, in memory of her husband

Lucia E. Sprague, by Albert A. Sprague

Edward M. Teall, by the Board of Underwriters

Mary A. Ryerson, by Martin A. Ryerson

Helen Marquis Memorial Fund, by Woman's Board and Alumnae Association of the Illinois Training School for Nurses

James and Mary E. Soper, by W. A. Soper, J. C. Soper, and Helen S. Heywood

Frank Julian, by the Estate of Frank Julian

Dr. Robert C. Hamill, by Ernest A. Hamill

Elizabeth McCormick, by Cyrus H. McCormick, Jr.

Cyrus H. McCormick, by Mrs. C. H. McCormick, Sr.

Mary M. Byrne Memorial, by the Alumnae Association of the Presbyterian Hospital School of Nursing and the Woman's Board

Mrs. J. W. Hooker and Mrs. N. A. Jones, by the Estate of Francis E. Curtis

Edward Brust, by the Estate of Francis E. Curtis

Mrs. Henry Curtis, by the Estate of Francis E. Curtis
Mary Jane Willing, by Henry J. Willing and Miss Willing

Frederick A. Keep, by Mrs. Sarah R. Beach, Mrs. Alice K.
Blair, Miss Frances R. Keep, and Mr. William F. Keep, in memory of their brother

Antoinette K. Dangler, by the Estate of Mrs. Charles I. Dangler

Anna B. Foote Averell, by her niece, Anna F. Grant

Byron L. Smith, by his sons

Frederick W. Crosby, by his bequest

William Stanley North, by Mrs. W. S. North

Edward F. and Dwight Lawrence, by Mrs. E. F. Lawrence

Thomas S. Kirkwood, by his bequest

S. W. and F. H. Rawson, by Frederick H. Rawson

Emma McCormick Smith, by Mrs. C. H. McCormick, Sr.

Albert A. Sprague, by his bequest

Eugene S. Pike, by Mrs. Eugene S. Pike, Eugene R. Pike, Charles B. Pike, and William W. Pike

Mrs. James M. Walker, by her bequest

Mary Raynolds Black, by her sister, Elizabeth Harris Black

Mary Rose Harris, by her bequest

Edith F. S. Shaw, by Mr. and Mrs. W. S. Shaw

Ministers and Missionaries, by the Woman's Board

Albert and Esther Soper, by bequest of Mrs. Etta Soper Smith

William F. Keep, by bequest of Mr. Keep and gift of Miss

Frances R. Keep

Phoebe Hough Armstrong, by bequest of her son, F. W. Armstrong

George Rose Nichols, by his bequest

Bernard A. Eckhart, by Bernard A. Eckhart

Persis Bouton McDougal

Edith Thomas Carton

Russell Lord, by his parents, Mr. and Mrs. John B. Lord Addison and Catherine Ballard, by their daughter, Mary

Ballard Derby Keogh

Joseph E. and Maria T. Otis

Robert Stuart, by his bequest

William J. and Joan Chalmers

John Hite Brown, by Anna M. Brown

Delwin and Ethel Jones, by bequest of Arthur B. Jones

Cornelia Bartow Williams

James A. Patten

William P. Tuttle, by his bequest

Robert Forsyth, by his bequest

Ida C. Lamson, by her bequest

Isabella F. Blackstone, by her bequest

George W. and Ellen I. Hale

Mrs. Charles A. Reed, by bequest of her daughter, Mary Reed

Grace B. Caldwell, by bequest of her husband, Frank C. Caldwell

Frank C. Caldwell, by Mrs. F. C. Caldwell and daughter, Constance C. Lockyer

Elizabeth W. Skinner

Frederick Latimer Wells

Alice Garfield Rumsey

Martha Whitney Rumsey

Samuel Hale

James Nelson Raymond, by Anna Louise Raymond

Anne Louise Raymond, by Anna Louise Raymond

William A. Douglass

William H. Hughtt

Marvin Hughtt

Orthena Little Stallwood

Elizabeth Spalding McElwee and R. Harvey McElwee

Marjorie Sawyer Goodman, by William O. Goodman

Kay Sawyer Goodman, by William O. Goodman

Albert B. Dick, by Mrs. Albert B. Dick

Kate S. Buckingham, by her bequest

Emma Gale Harris, by her son, Stanley G. Harris

Samuel D. and Daisy J. Snow, by bequest of Mrs. Snow

MEMORIAL WARDS AND BEDS

The William Armour Memorial Ward of ten beds was thus named in 1890 by reason of a gift from Mrs. Bertha Cobb Armour in memory of her husband.

In 1899 Mrs. A. J. Averell made a gift by reason of which a ten-bed ward was named in memory of her husband, A. J. Averell.

Memorial Beds have been named as follows:

Margaret McKay, by Mrs. Barbara Armour

Robert Murdoch

Jane Murdoch

Ernest A. Hamill

Chicago Theological Seminary, by the D. A. Jones Estate

McCormick Theological Seminary, by the D. A. Jones Estate

Jacob Beidler, by Jacob Beidler

Simon Reid, by the Simon Reid Estate

Lake Forest Church, by the congregation of the Lake Forest Presbyterian Church

Sidney Sawyer, by the Sidney Sawyer Estate

Lafayette McWilliams

Isabella McLerie

Nellie W. Tripp, by J. Stephen Tripp

Leverett Thompson

E. H. Smith

Claudius B. Nelson, by the Mary Rutherford Nelson Estate
Ada Z. E. Piper, by the Ada Z. E. Piper Estate
Phoebe Carter, by the Phoebe Carter Estate
Joseph M. Morris
Maria Warren Cobb, by Silas B. Cobb

YEARLY BEDS

Fourth Presbyterian Church, designated by payment of \$300 annually

Richard A. Wells, designated by payment of \$300 annually by Mrs. T. E. Wells in memory of her son.

MEMORIAL BEDS FOR CHILDREN

One Sunshine Bed, through the efforts of Frances D. Gould
Nine Cheer Up Beds, by Presbyterian Sunday Schools of the Chicago Presbytery and the Woman's Board

Cheer Up Bed No. 6 is named for Jessie McClure Main
Cheer Up Bed No. 7 is named for Bessie Parsons Stone

Three Tag Day Beds, through the efforts of Tag Day workers of the Woman's Board

Mary D. McDivitt, by Mrs. S. P. McDivitt

Clara Crouse Bartlett (Mrs. Charles Lessingwell Bartlett), by her bequest

Henrietta B. Ball, by Lily T. Ball

Edward Arthur Magie, by William A. Magie

Katherine Lind Orr

Louise Weagley McWilliams

Memorial Buildings and Gifts

Joseph Presley Ross Building, completed in 1884, by the gifts of Tuthill King and others.

Robert C. Hamill Wing, 1887, by Dr. Joseph P. Ross, Cyrus H. McCormick, Jr., and members of the First Presbyterian Church.

Daniel A. Jones Memorial Building, 1888, by his bequest and gifts from his heirs.

Private Pavilion, 1908, by friends of the Hospital.

Jane Murdoch Memorial Building, 1912, by her brother, Thomas Murdoch.

O. S. A. Sprague Home (School of Nursing building), 1913, by friends of Mr. and Mrs. Sprague, the estate of A. A. Sprague, and bequest of Mrs. A. A. Sprague.

MEMORIAL FUNDS AND GIFTS

Endowments for specified purposes are designated as Memorial Funds and named as desired by the donor. Memorial gifts to the general endowment fund or to be expended currently for specified purposes, such as equipment, furnishings, etc., also afford opportunities to honor the names of dear ones by assisting the Hospital in its work.

BLOOD TRANSFUSION FUND

Through the Blood Transfusion Fund, started by Mrs. E. R. LeCount in 1935 by a gift of \$1,000 in

memory of her husband, Dr. LeCount, many needy persons have been provided with blood transfusions. Miss Gracia M. F. Barnhart has contributed \$600 to this Fund in memory of her parents, and small donations have been received from others. This fund is used to provide blood transfusions for patients who cannot obtain a volunteer donor and lack means to pay a professional donor. Contributions to the fund are urgently needed.

SUGGESTIONS FOR GIFTS AND ENDOWMENTS

\$10 a year constitutes the donor a member of the Hospital.

\$100 constitutes the donor a life member of the Hospital.

\$300 given annually names a bed in the general wards.

\$5,000 names a bed in the Children's Ward in perpetuity.

\$5,000 names an adult bed during one life.

\$7,500 names an adult bed in perpetuity.

\$10,000 names a room in the Private Pavilion as a perpetual memorial.

\$20,000 names a four-bed ward as a perpetual memorial.

\$35,000 endows a graduate nurse in perpetuity to care for seriously ill ward patients.

\$50,000 names a ten-bed ward as a perpetual memorial.

ENDOWED

nurses help save lives

SPECIAL nursing care often is imperative following surgery and in cases of serious illness. Free patients and many of those who pay the regular ward rates lack means to pay a special nurse. Four endowment funds established for this purpose and one annual contribution made it possible for Presbyterian Hospital to provide special nursing care during critical periods to 1,088 different patients in 1939.

Miss M. came into the hospital with an infection which had begun with a small skin abrasion but had spread over the entire face. Her temperature on admission was 105. Later it went up to 106.6 and staphylococcus septicemia developed, followed by other complications. Her family was unable to pay for services of a special nurse, but intensive nursing care was imperative. For two weeks endowed nurses cared for this 16-year-old girl day and night. Most of the time fresh hot packs were applied at intervals of 15 to 30 minutes. Through such vigilance and by the administration of a new drug, medical science and nursing care were able to save the life of this patient.

Mr. D., who has a wife and four children, had been disabled for over four years following a fall in which his back was injured. Finally he entered Presbyterian Hospital for an operation in which misplaced cartilage was removed from between the vertebrae. Endowed nurses cared for him during the critical period following the operation. He was discharged from the hospital two weeks later and will soon be able to return to work.

Miss M. and Mr. D. are only two of thousands of patients who have received endowed nursing care in past years because generous friends have said through endowments and donations "write me as one that loves his fellowmen."

The 1939 record of service by these nurses was as follows: Helen B. North Nurse—234 days' care to 193 patients; Luella Pearson Molloy Nurse—272 days, 241 patients; Ernest A. Hamill Nurse—237 days, 180 patients; Gladys Foster Nurse—254 days, 208 patients; Maintained Nurse—293 days, 266 patients.

In many instances endowed nursing not only benefits the patient cared for but makes possible valuable research study for the advancement of medical knowledge, thereby benefiting humanity at large. With the increasing need for free and part-pay care, more endowed nurses are urgently needed.

For \$35,000 a nurse can be endowed in perpetuity: each year she will average caring for 200 different patients during the critical periods when life hangs in the balance or when her ministrations are needed to help ameliorate intense suffering. A gift of \$1,500 will maintain a nurse for one year. Such endowments and gifts may bear any name designated by the donor.

Any amount may be contributed toward the endowment of a nurse (Ward Free Nurse Fund) or toward the maintenance of a nurse during the current year.

Left, an endowed nurse accompanies a ward patient from the operating room and remains at her side during the critical hours that follow. Right, endowed nurses often are assigned to give the constant care needed when a patient is placed in an oxygen tent.

OPERATING ROOMS

James B. Herrick, M.D.

THROUGHOUT its history Presbyterian Hospital has had as members of its Medical Staff physicians and surgeons who have been acclaimed in professional circles for their contributions to the advancement of medical knowledge. The names of Joseph Presley Ross, David Wilson Graham, Edward L. Holmes, Christian Fenger, Frank Billings, Nicholas Senn, Bertram Sippy, Arthur Dean Bevan, and Dean Lewis are only a few of those that occupy a place of distinction in medical history. A considerable number of others have gone out from Hospital internships and residencies to become distinguished leaders in various fields of medical practice, research, and teaching.

To staff members and interns alike for more than fifty years the name of James B. Herrick has stood for kindness, cooperation, professional integrity, and the pressing forward to new frontiers of knowledge. To the medical profession generally, the name of Dr. Herrick has meant fruitful research in the study of the heart and its diseases and leadership in professional organizations and institutions. Within the last year further recognition came to Dr. Herrick when he received the 1939 Distinguished Service Medal and Citation from the American Medical Association and the title of Master from the American College of Physicians. More recently he was selected as the 1940 recipient of the "Gold-Headed Cane," an annual award by the Medical School of the University of California.

It was with the aid of Chicago's first electrocardiograph, presented to Presbyterian Hospital by the late Mrs. Cyrus H. McCormick, Sr., that Dr. Herrick made his first important discoveries concerning coronary thrombosis, the field of research in which he has achieved notable distinction. His contributions to medical literature on this subject have been extensive and valuable.

Graduated from Rush Medical College in 1888, Dr. Herrick has been closely associated with the

for the ADVANCEMENT *of Medical Knowledge*

Hospital almost from the beginning of the institution and has been a member of the Medical Staff since 1891. He was on the faculty of Rush Medical College as an instructor in medicine from 1890 to 1894, adjunct professor from 1894 to 1900, and professor from 1900 to 1927, since which time he has been emeritus professor of medicine. He is still active as a consulting physician on the Hospital staff.

Dr. Herrick is past president of the Association of American Physicians, the Congress of American Physicians, the American Association of the History of Medicine, the Institute of Medicine of Chicago, and the Chicago Society of Internal Medicine. He is a fellow of the New York Academy of Medicine and has received recognition from numerous other professional organizations. He holds honorary degrees from the University of Chicago, the University of Michigan, and Northwestern University.

In 1939, as in previous years, members of the Medical Staff passed on to the profession in general knowledge acquired through clinical study and research work in the Hospital. Addresses and papers presented by staff members at local and county professional meetings totaled 104; state and regional meetings, 60; national conventions, 34; international conventions, 3. Twenty-one addresses were given at lay meetings.

Last year members of the staff filled 18 offices or committee chairmanships in local professional societies, six in state and regional organizations, 13 in national and one in international societies. Five staff members are editors of professional journals. The chairman of the American Board of Internal Medicine and the president of the American Board of Urology are members of the staff of this hospital. These are two of the boards chosen jointly by national professional organizations to conduct examinations of those who wish to be certified as specialists in the various fields of medical practice. Forty-three members of the Hospital Medical Staff made contributions to medical literature in 1939.

REPORT of the Woman's Board

THE WOMAN'S BOARD carried all its usual activities in 1939, chief of which are support of the Library and the Social Service Department; assistance to the Children's Department, Occupational Therapy Department, and School of Nursing; and additions to endowment funds for Cheer Up Beds (Child's Free Bed), maternity bed (Babies' Alumni), and Ward Free Nurse.

The full-time librarian was given six months' leave to assist the Junior League of New York in establishing a hospital library service. A trained substitute was provided during this period. Donations of books and volunteer service by members were of material help.

Four social service workers, assisted by volunteers, care for the needs of Hospital patients and cooperate closely with the social service staff of Central Free Dispensary and with outside agencies. Through special gifts a new car was purchased for the department, replacing the old one which was in constant need of repair.

Six scholarships totaling \$690 were awarded and loans amounting to \$910 were made to students of the School of Nursing. The School of Nursing Committee expended \$380 from card party receipts for miscellaneous needs of the School.

The Publicity Committee gave talks in 19

churches. The J. Hall Taylor movie of the Children's Department has been in demand for showings in the Sunday Schools. Other church groups could arouse interest in the work of the Hospital by showing this film.

During the year \$14,055.01 was collected for current use, not including \$807.20 proceeds from the 1939 card party of the School of Nursing Committee. Additions to endowments totaled \$5,922.39, including \$2,244 collected during the year. It is impossible to compute the value of linens, sewing, jellies, silver obtained with coupons, books, and other articles donated, and the time represented by these efforts and other work of the board.

By *memory gifts* opportunity is afforded not only to our own members but to others to contribute toward any work of the Hospital. Special events in the lives of friends, such as anniversaries, holidays, and graduations, may be thus commemorated. As memorials for our board members we contribute to the Ward Free Nurse fund. The far-reaching humanitarian service of this and the other Endowed Nurse funds which have come to the Hospital mainly through the Woman's Board is described in detail on page 33.

MRS. ERNEST E. IRONS,
President, Woman's Board

WOMAN'S BOARD DONATIONS THROUGH CHURCH ORGANIZATIONS — 1939

Donations through church organizations are classified by funds in the summary of receipts which appears on the next page. The amounts by churches were as follows:

First, Chicago.....	\$ 611.14	Forward.....	\$3,574.81	Forward.....	\$7,189.51
